

LMDZ-régional, jusqu'où iras-tu?

(quelques exemples d'utilisation du LMDZ pour étudier le climat régional)

Laurent Li

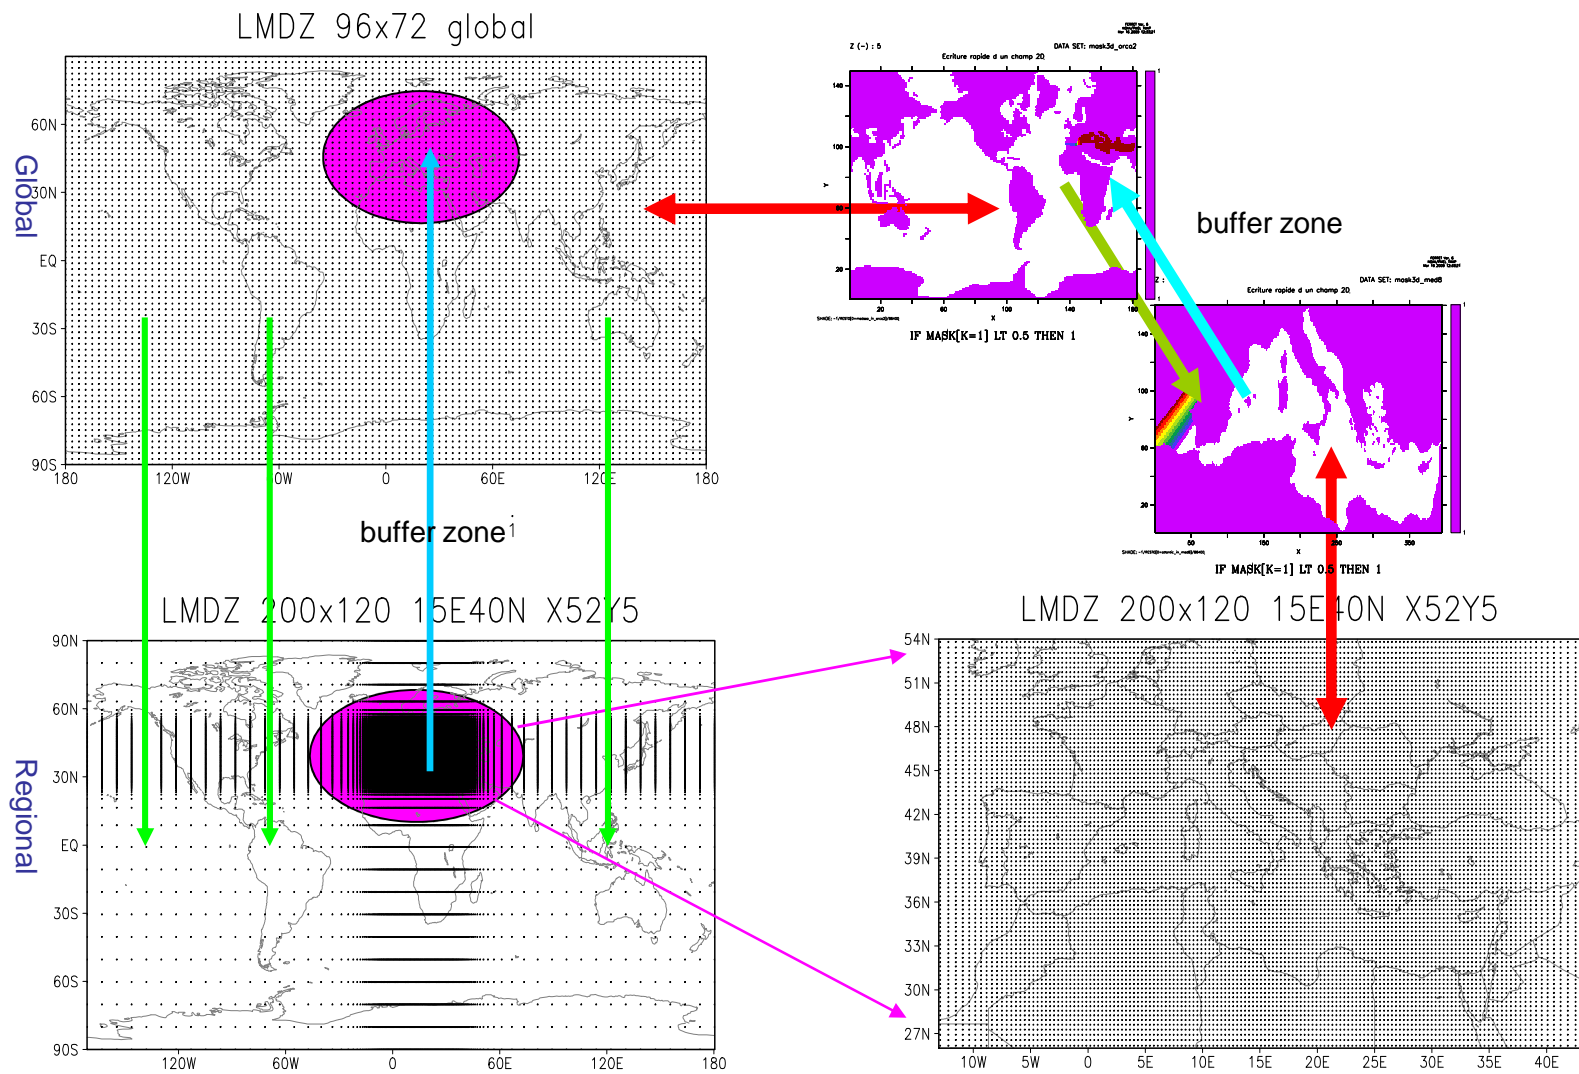

Laboratoire de Météorologie Dynamique,
IPSL/CNRS, Paris

- LMDZ utilisé comme un modèle régional
- Two-way nesting, un outil innovant
- Perspectives: CORDEX, LMDZ/WRF

LMDZ-regional: Med version

- LMDZ-Med is a global atmospheric GCM with variable grid and a zoom over the Mediterranean basin. **Local resolution: 30 km.**
- It is run as a regional climate model, with **nudging conditions** (every 6 hours) from a global model (LMDZ-g, ERA40, IPCC, etc.) at low resolution outside the zoom. The model is free to have its own behaviours inside the zoom.

- Global O-A coupled model: LMDZ-global / ORCA2
- Regional O-A coupled model: LMDZ-regional / MED8

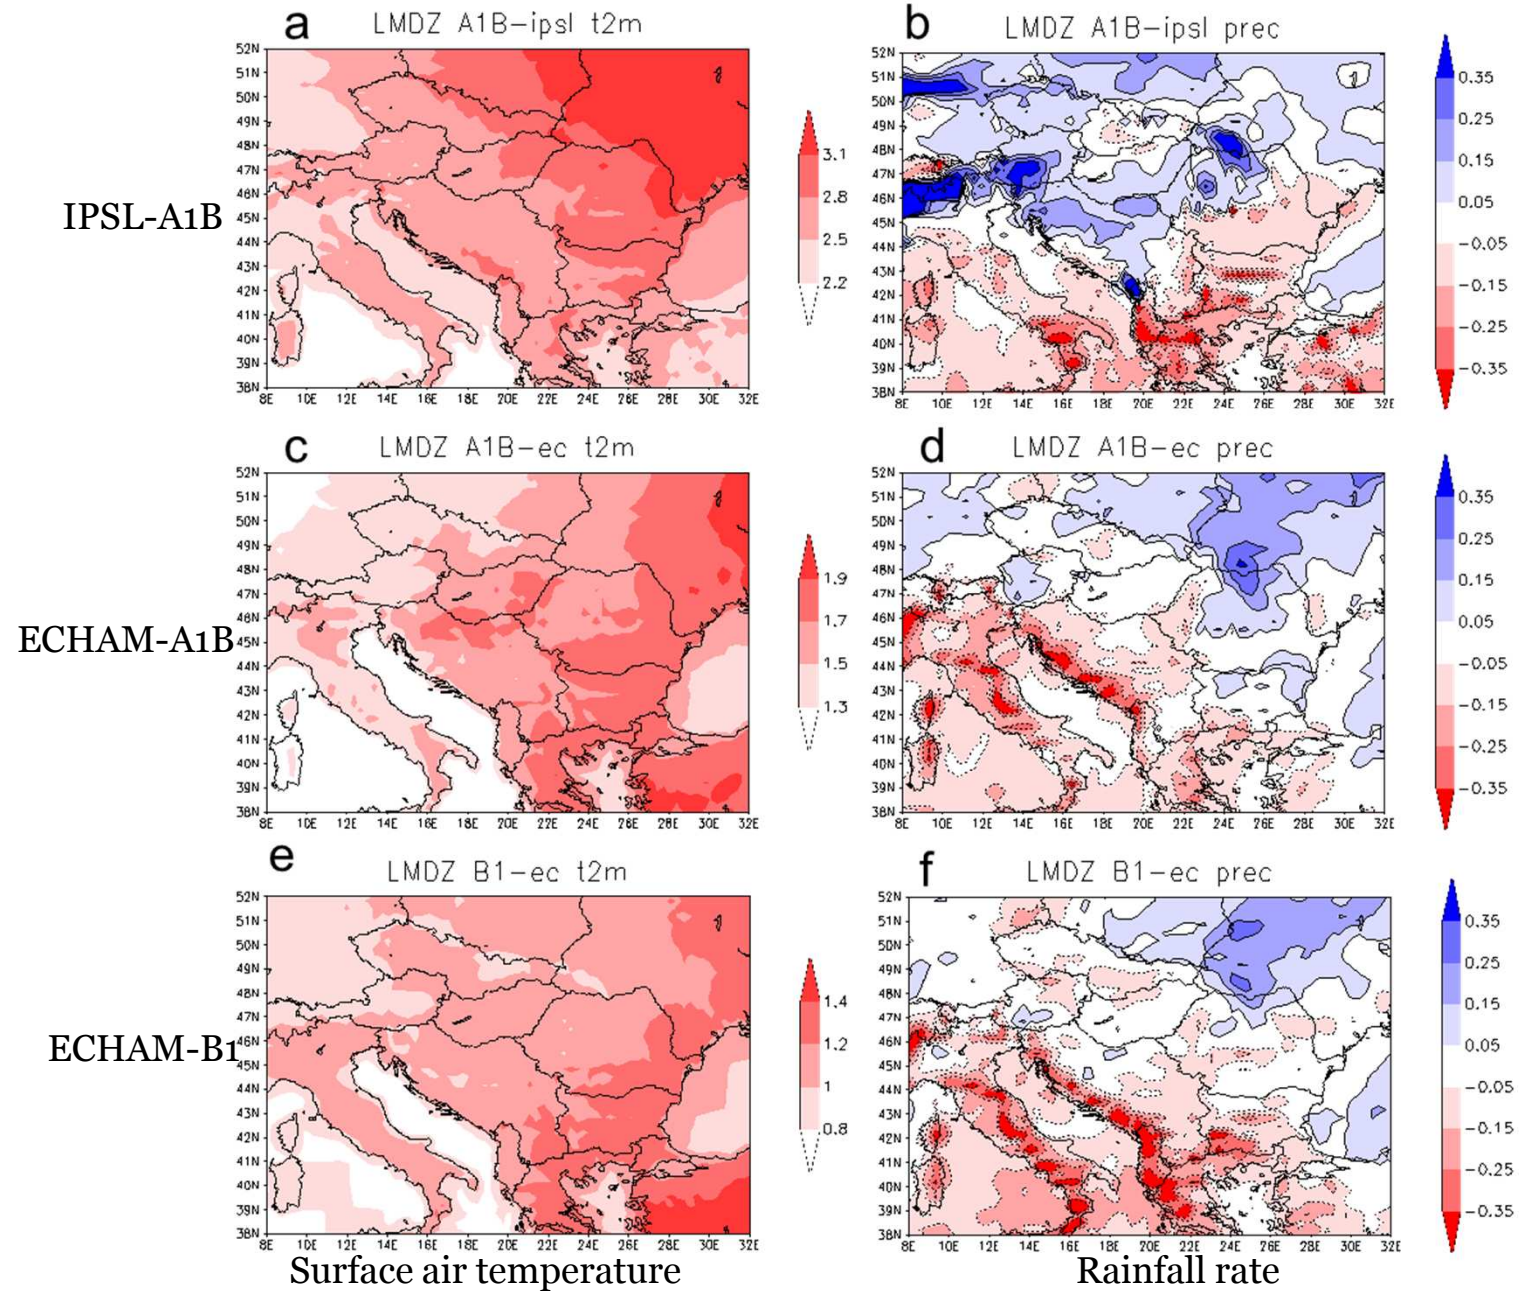

- Two atmospheric models are coupled through buffer zones
- Two oceanic models are also coupled through buffer zones

Schematic of the quadruple coupling in IPSL: M4

LMDZ-regional and REMO for climate change downscaling (ECHAM A1B) in Eastern Europe

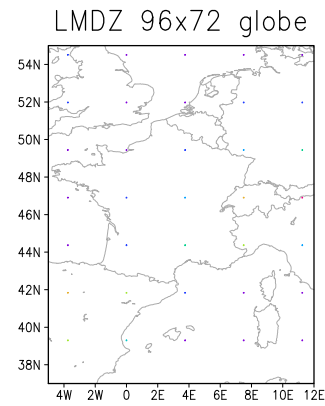

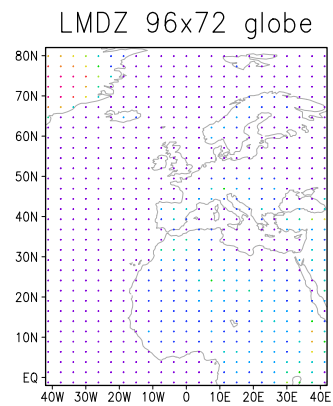

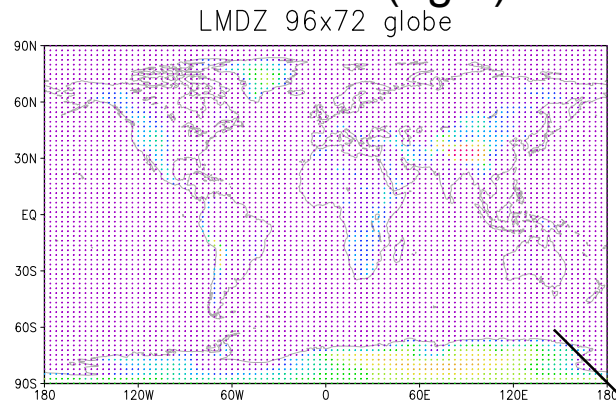

LMDZ-regional climate change downscaling (3 different scenarios) in Eastern Europe

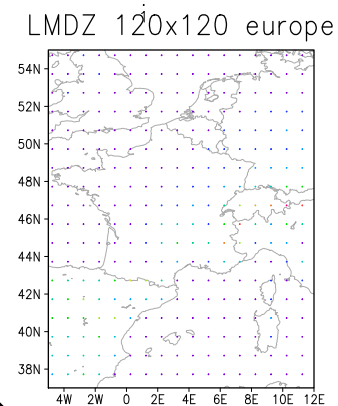

A downscaling study for France:

- Three versions: Global / Europe / France
- Two-way nesting between Global/Europe
- One-way nesting from Europe to France

LMDZ grid schemes for the whole earth (left), for Europe (middle) and for France (right) in three versions

**LMDZ Globe
(300 km)**

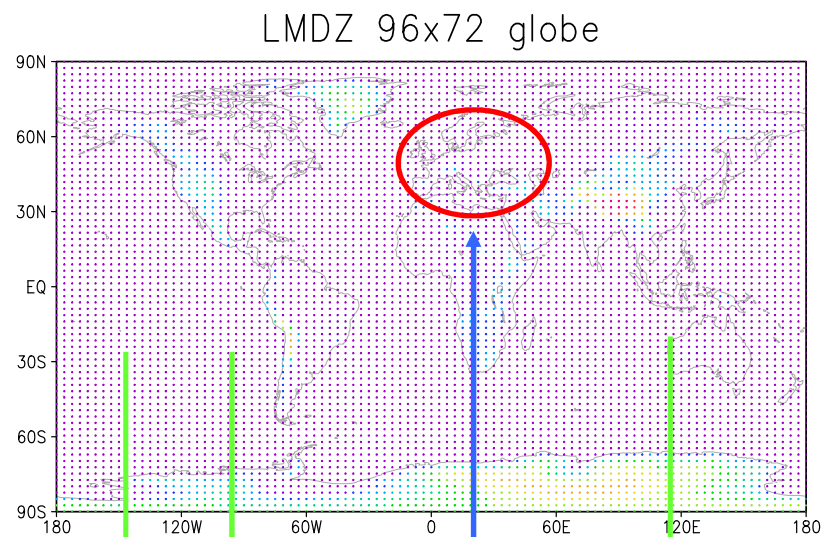

**LMDZ Europe
(100 km)**

**LMDZ France
(20 km)**

Two-way nesting between LMDZ-regional and LMDZ-global

LMDZ 120x120 france

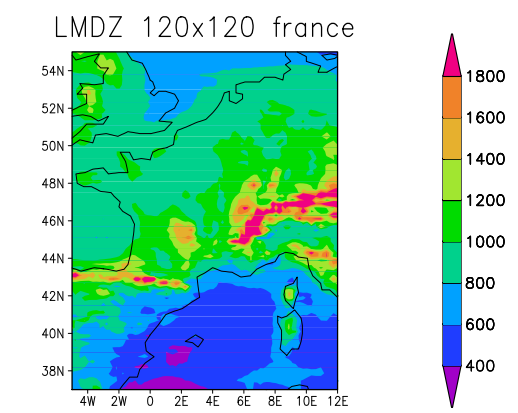

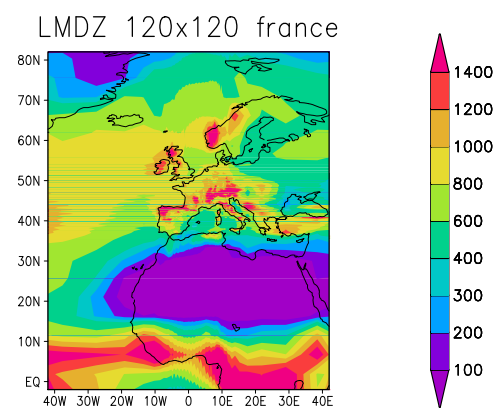

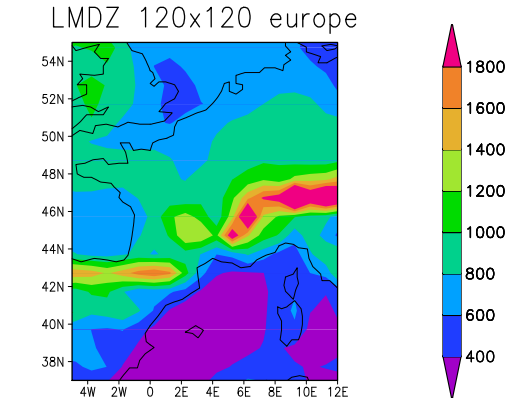

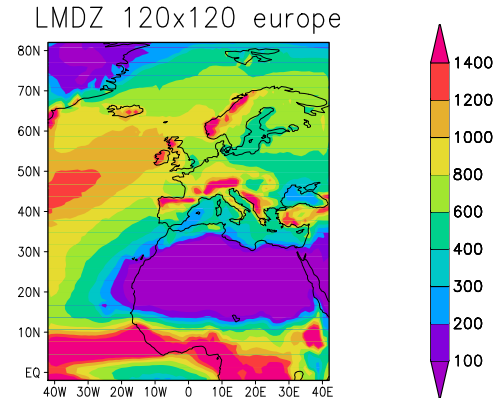

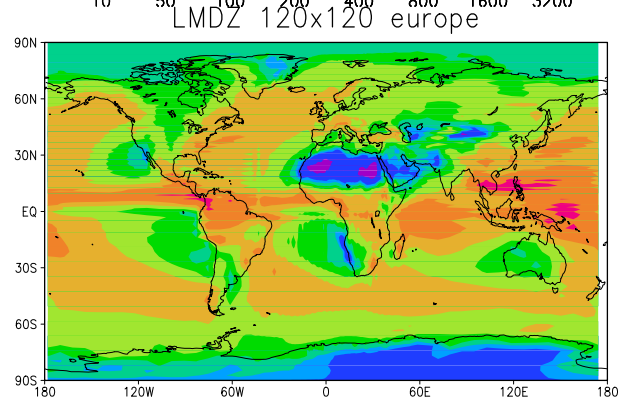

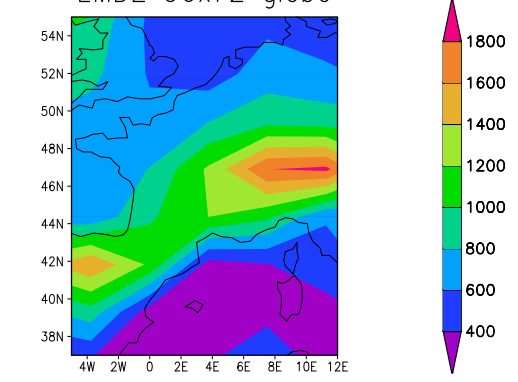

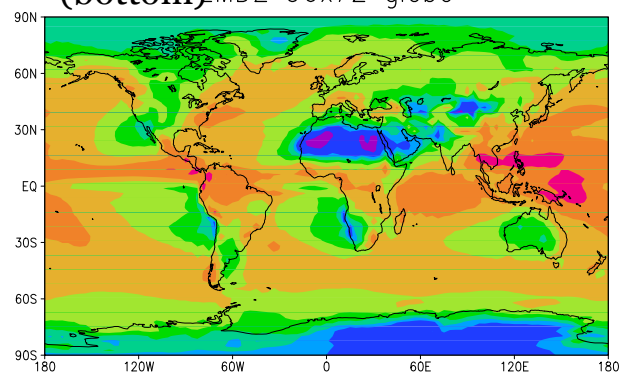

LMDZ 120x120 europe

LMDZ 120x120 europe

Annual-mean precipitation (mm) in three LMDZ models: Globe (top), Europe (middle) and France (bottom)

Pr (mm/jour), Tx(° C) et Tn (° C) pour un niveau de retour à 50 ans, à Marseille, observation et trois résolutions du LMDZ

Pr	Obs	300km	100km	20km
1961/1990	145	43	42	62
2021/2050	?	38	56	93

Tx	Obs	300km	100km	20km
1961/1990	38.9	32.2	34.7	35.6
2021/2050	?	36.0	36.9	37.5

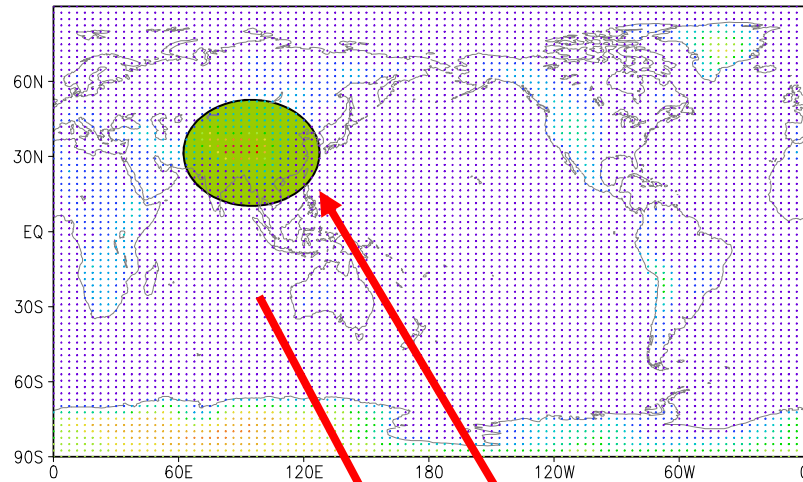

Tn	Obs	300km	100km	20km
1961/1990	26.2	21.7	24.8	25.6
2021/2050	?	24.0	27.0	27.8

Pr: précipitations intenses

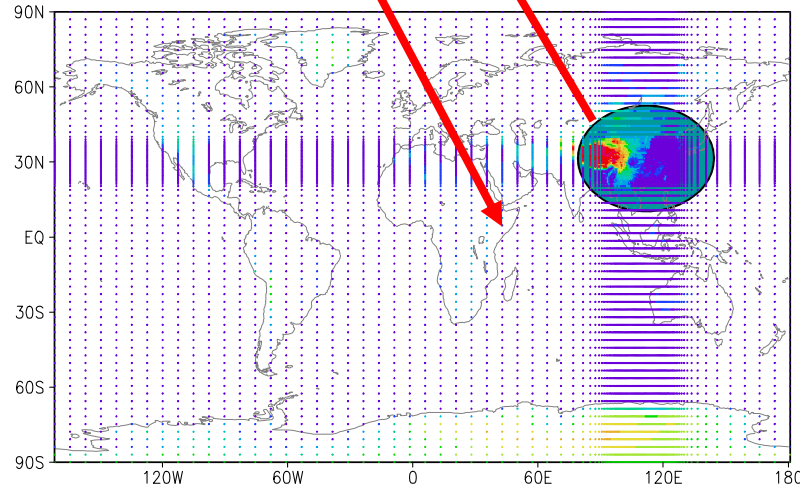

Tx: température maxi de jour

Tn: température de nuit chaude

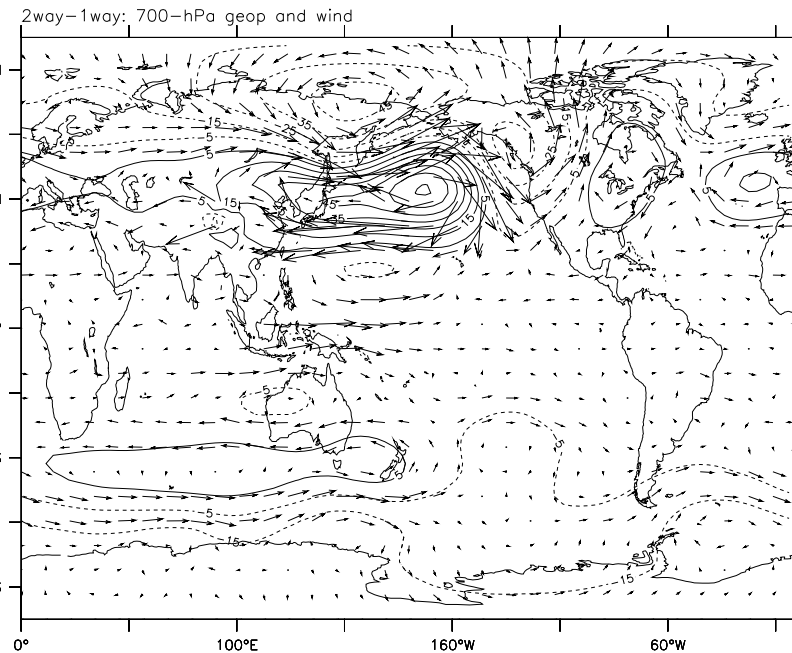

LMDZ-global 96x72

LMDZ-regional 120x90

Feedbacks from LMDZ-regional to LMDZ-global: vers une super-paramétrisation?

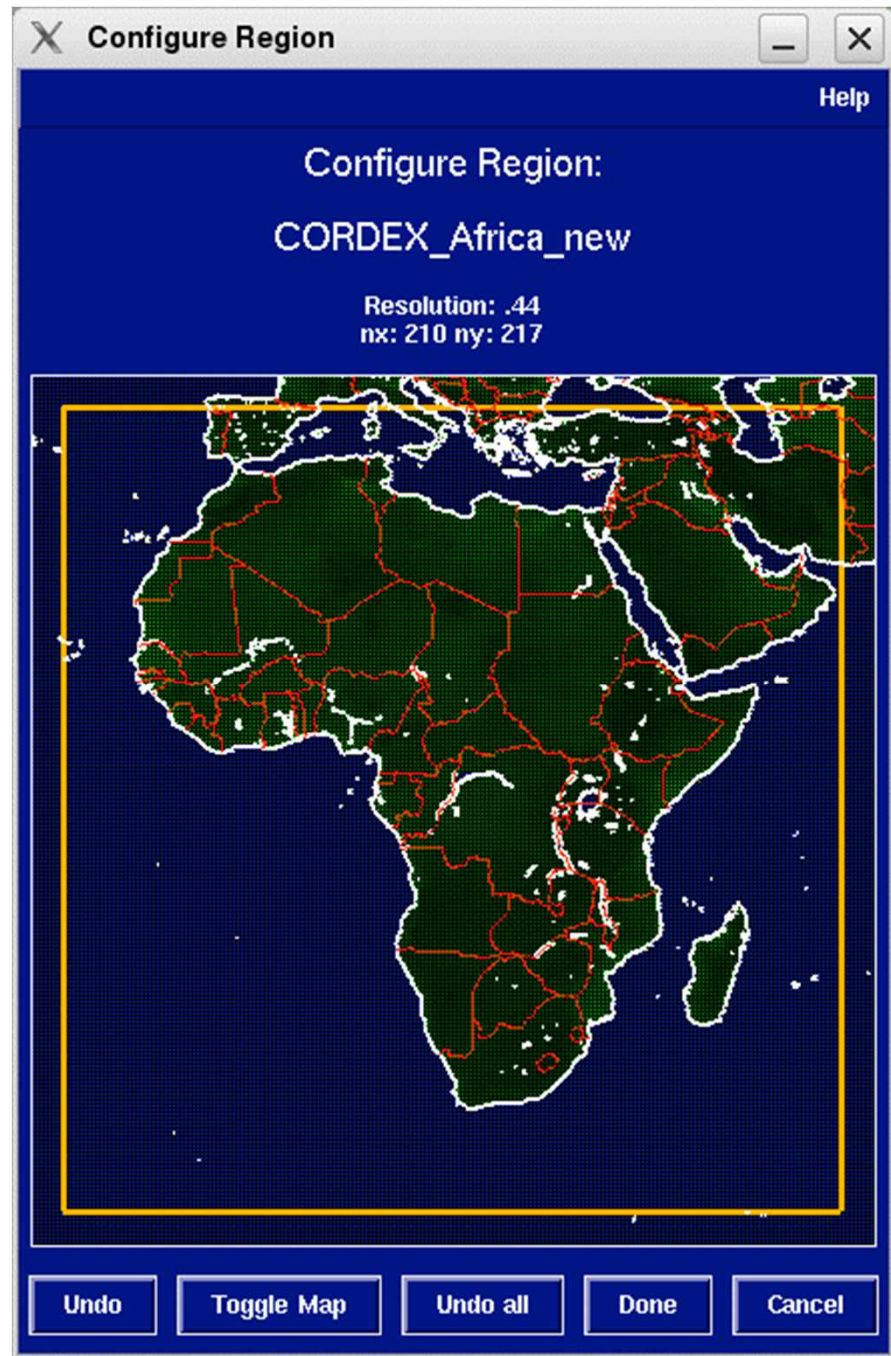

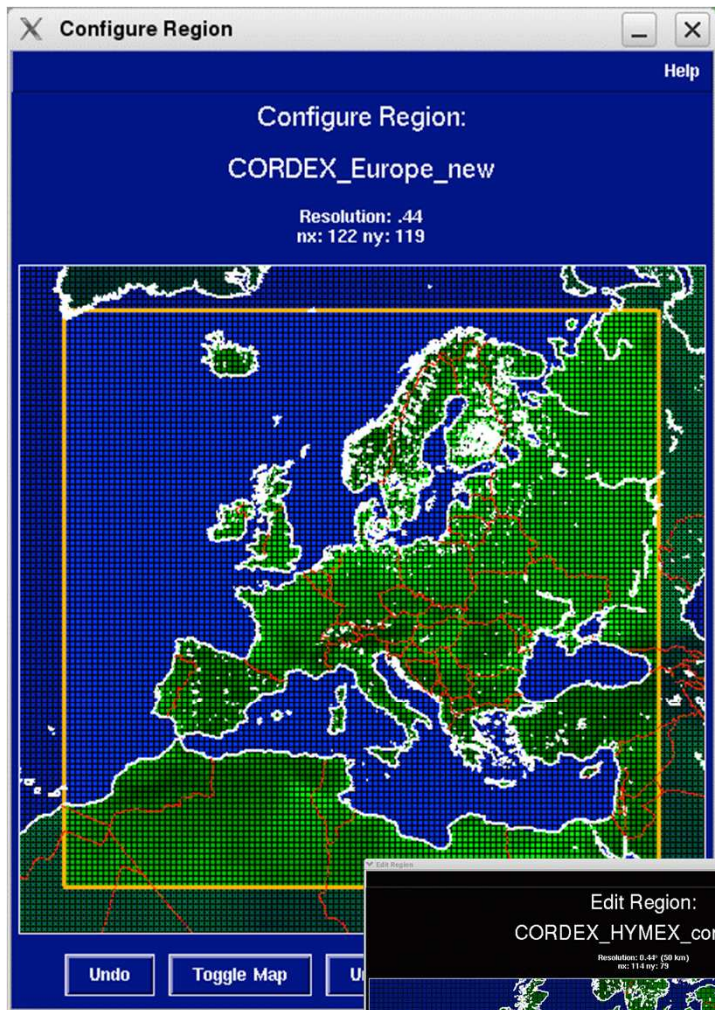

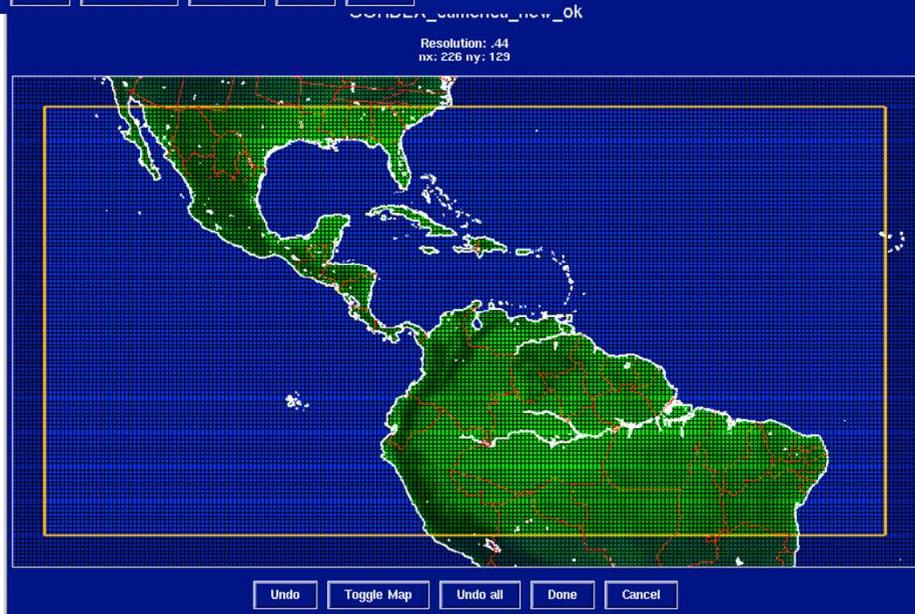

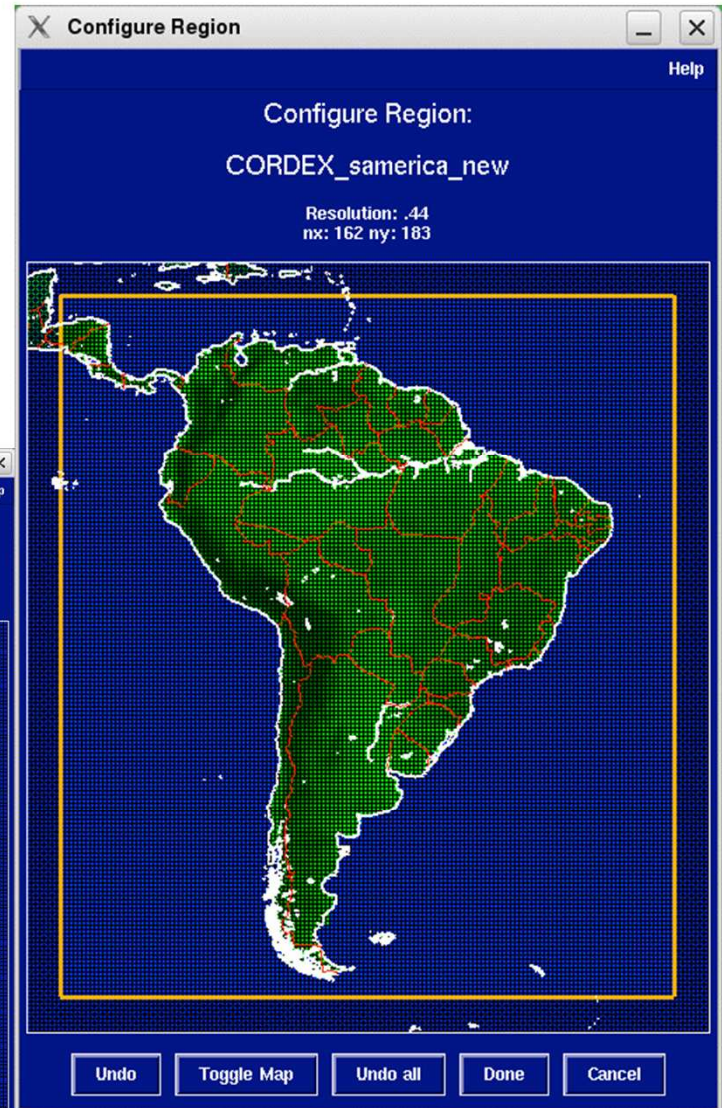

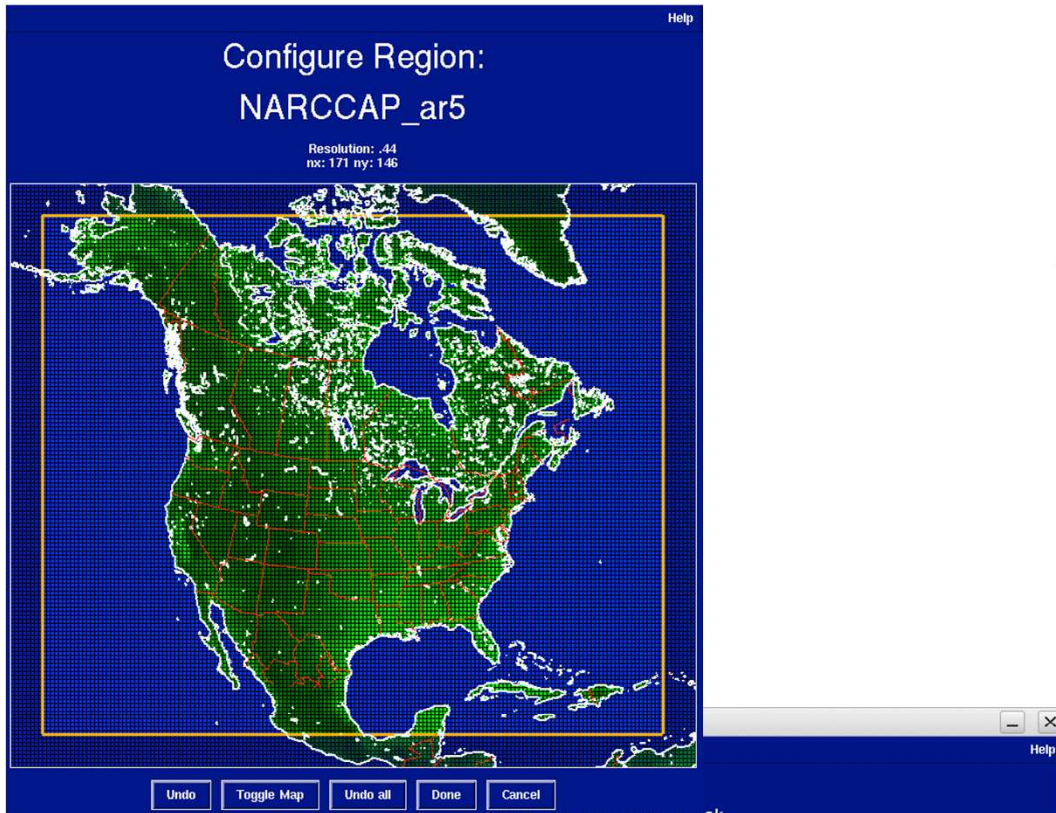

2way – 1way in LMDZ-global:
700-hPa height and wind

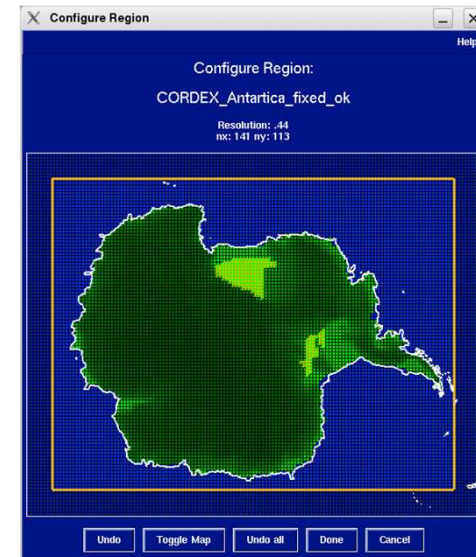

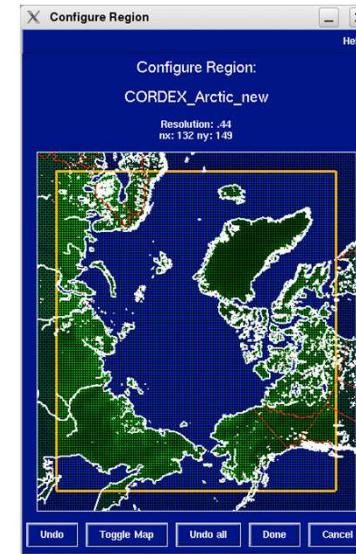

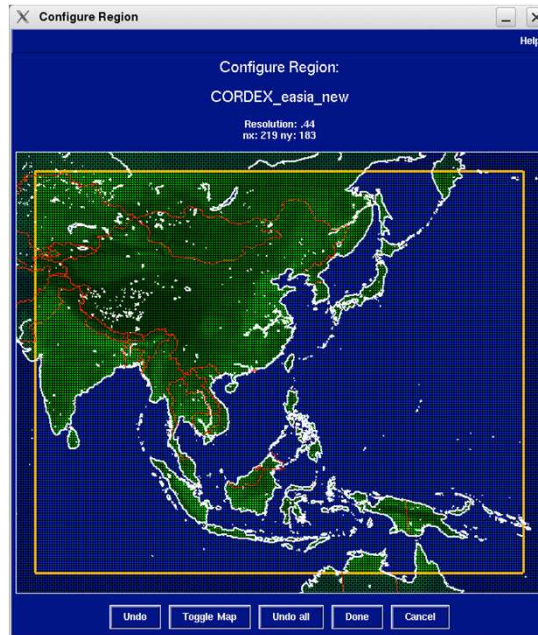

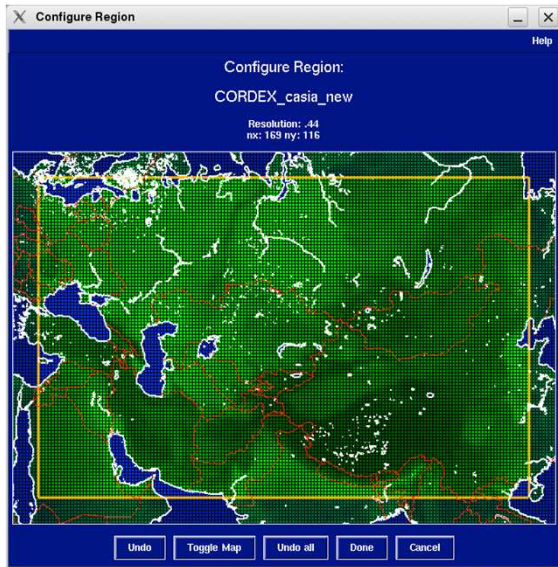

Two-way nesting between LMDZ-regional and LMDZ-global

CORDEX, a major exercise for IPCC-AR5

Also for LMDZ in the next few years?

Physics of LMDZ in WRF, our future ?
