Introduction to IPSL modeling tools and environment (modipsl and libIGCM)

Institut
Pierre-Simon
Laplace

April 2022, IDRIS
IPSL « Platforme » group

Outline

1. **Introduction**
2. IPSL models
3. High Performance Computing context
4. Which supercomputer(s) for us ?
5. Tools, configurations and performances
6. To go further
7. Now for today

What this training is for?
(and is not)

Objectives of this course:

- Have an overview of the tools used to launch Earth climate models, and to know how to use them.
- Know and understand the environments at your disposal (supercomputers).
- Get an idea of the context at IPSL in terms of work teams and models.

Not seen:

- We will not explain how each model works (parameters, specific features), how to launch a zoom or a specific resolution.
- You will not see details about parallelisation.

=> look for dedicated trainings

Institut Pierre-Simon Laplace

Institut Simon Laplace (IPSL)

IPSL gathers 8 laboratories for which research topics concern the global environment.

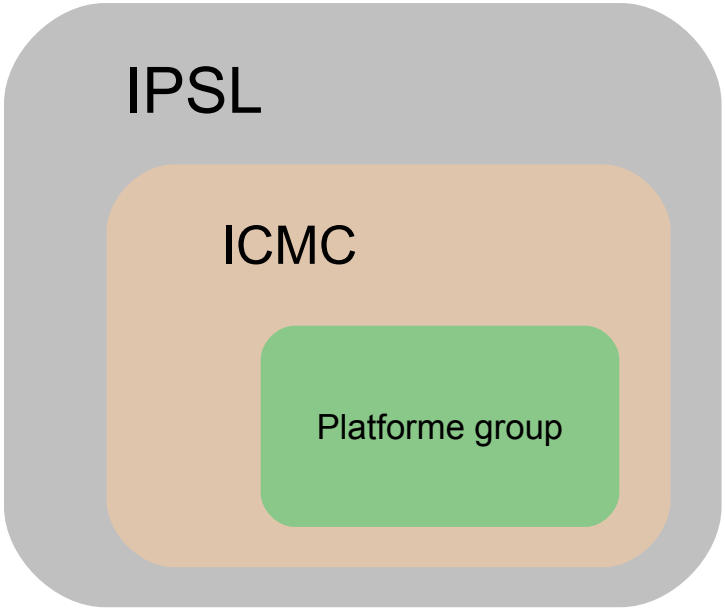
CEREA / GEOPS / LATMOS / LISA / LMD / LOCEAN / LSCE / METIS

IPSL Climate Modeling Centre (ICMC https://cmc.ipsl.fr/)

Activities articulated around :

- The development of an integrated model of the Earth system
- To run and analyse climate simulations
- Working groups to share skills
- A scientific expertise

To be involved in ICMC activities, subscribe to the mailing list ***ipsl_cmc@listes.ipsl.fr***



IPSL Platforme group : in charge of the development of modipsl, libIGCM, XIOS usage, metrics tools deployment

To contact the list: ***platform-users@listes.ipsl.fr***

4. Which supercomputer(s) for us ?
5. Tools, configurations and performances
6. To go further
7. Now for today

IPSL Earth System Model

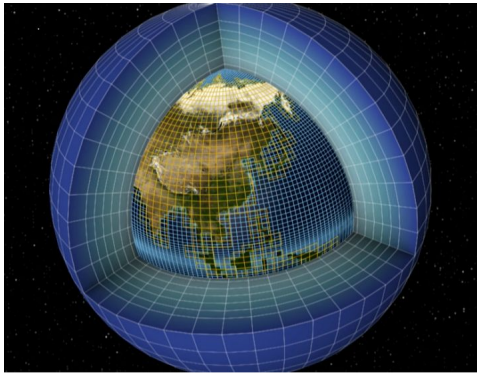
Control environment:
libIGCM/modipsl

In/Out server:
XIOS

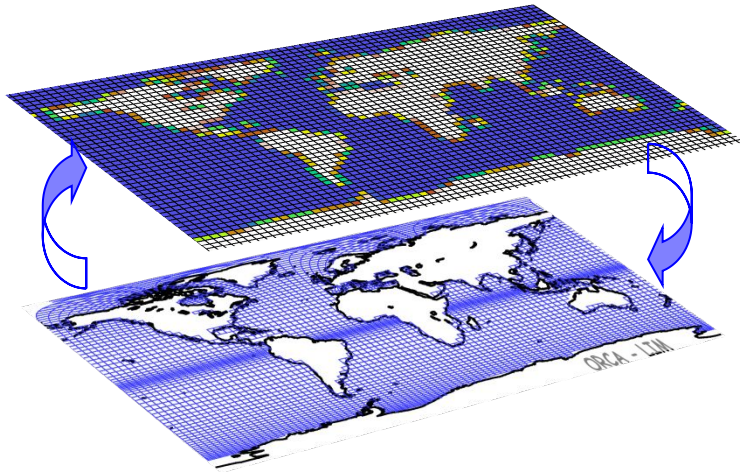
INCA/REPROBUS
(atmospheric chemistry, aerosols)

LMDZ
(atmosphere)

ORCHIDEE
(land surfaces, vegetation)



OASIS3-MCT
(coupler)



OPA
(ocean)

PISCES
(marine biogeochemistry)

LIM
(sea ice)

NEMO

https://www.nemo-ocean.eu

NEMO (**N**ucleus for **E**uropean **M**odelling of the **O**cean) is a state-of-the-art modelling framework for research activities and forecasting services in ocean and climate sciences, developed in a sustainable way by a European consortium.

3 main components:

- **OPA**: models the ocean {thermo}dynamics and solves the primitive equations
- **LIM**: models sea-ice {thermo}dynamics, brine inclusions and subgrid-scale thickness variations
- **PISCES**: models the {on,off}line oceanic tracers transport and biogeochemical processes

NEMO_v6.1	*NEMO 3.6*
NEMO_v6.5	*NEMO 4*

http://lmdz.lmd.jussieu.fr

LMDZ (**L**aboratoire de **M**étéorologie **D**ynamique **Z**oom model) is a general circulation model (or global climate model) developed since the 70s at the LMD, which includes various variants for the Earth and other planets (Mars, Titan, Venus, Exoplanets). It is first and foremost a research tool.

2 dynamic cores:

- **Actual**: based on regular LatxLon grid. Easy to use but limited in terms of parallelization on actual machines.
- **DYNAMICO**: icosaedric grid that allows very high scalability on HPC machines (still in development).

LMDZOR_v6.2.2	*ATM 144x144x79*
ICOLMDZOR_v7.1	
IPSLCM6.2.2	*ATM 144x144x79 / OCE ORCA1*
	ATM 256x256x79 / OCE ORCA1

https://orchidee.ipsl.fr

ORCHIDEE (**O**rganising **C**arbon and **H**ydrology **I**n **D**ynamic **E**cosystems) represents the state of the art in global land surface modelling. It solves the water-energy-carbon budget, represents the ecosystem in terms of a range of Plant Functional Types and vegetation with a big leaf approach. It uses precipitation, air temperature, wind, solar radiation, humidity and atmospheric CO_2 as forcing data and computes its own phenology.

2 major components:

- **Sechiba**: water and energy budgets
- **Stomate**: biogeochemical and anthropogenic processes

LMDZOR_v6.2	*ATM 144x144x79 / ORCHIDEE_2_2*
LMDZOR_v6.3_work	*ATM 144x144x79 / ORCHIDEE 3*
ORCHIDEE_2_2	
ORCHIDEE_trunk	

INCA / REPROBUS

http://inca.lsce.ipsl.fr

INCA (**IN**teraction with **C**hemistry and **A**erosols) is a chemistry and aerosol model coupled to General Circulation Model, LMDz. LMDzINCA accounts for emissions, transport (resolved and sub-grid scale), photochemical transformations, and scavenging (dry deposition and washout) of chemical species and aerosols interactively in the GCM. INCA is often coupled to the ORCHIDEE biosphere model in order to determine interactively the exchange of chemical species (emissions, deposition) between the atmosphere and the surface.

LMDZORINCA_v6.2.2 *ATM 96x96x39 (AP) or 144x144x79 (NP)*

REPROBUS model (**RE**active **P**rocesses **R**uling the **O**zone **BU**dget in the **S**tratosphere) coupled with the general circulation atmosphere model LMDz is a 3-D model designs to solve the dynamic and chemistry in the stratosphere in order to study ozone layer and its interactions with climate.

LMDZREPR_v6.2 *ATM 144x144x79*

Why do we need supercomputer ?

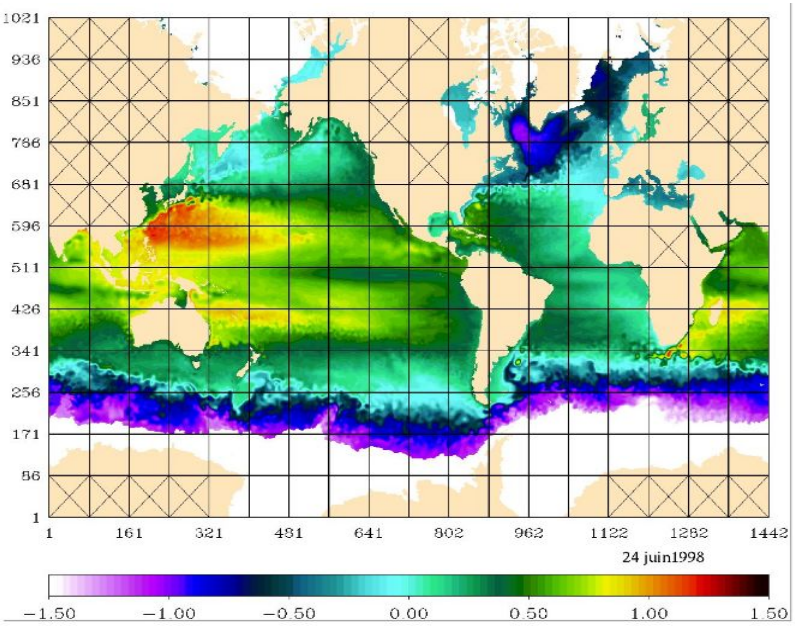
⇒ *parallelization*!

All models are parallelised with MPI or MPI+OpenMP.

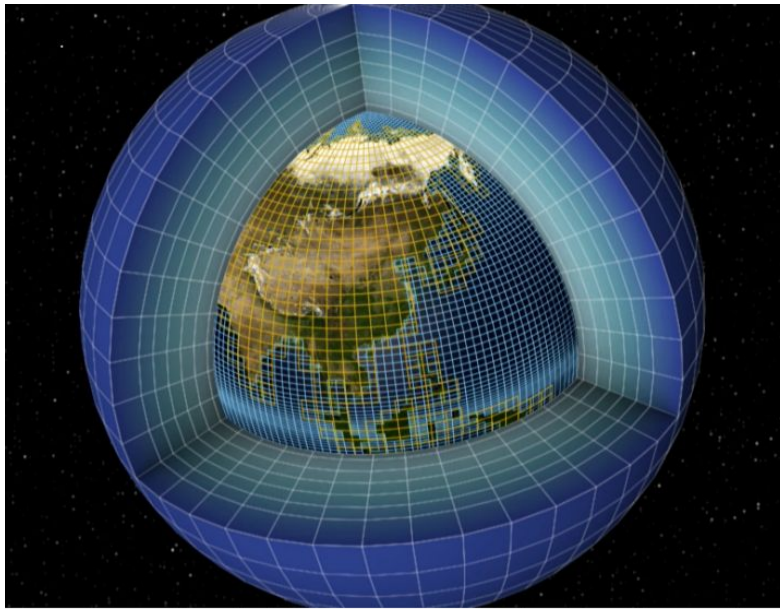
Parallelisation allows to run the same executable on several sub-domains to reduce the real time of the execution.

MPI (**M**essage **P**assing **I**nterface) is used to divide **lon/lat grid** splitting latitudes and **OpenMP** (**Open M**ulti-**P**rocessing) to parallelise the **vertical axis** through shared memory threads.

→ The global domain is divided into sub-domains, each core treats one sub-domain



NEMO model parallelism (MPI only)



LMDZ model uses hybrid MPI/Open MP parallelisation

What does HPC usage imply for you? (1/2)

Environment:

- A supercomputer is not a personal computer! Each supercomputer is unique and requires a dedicated staff to maintain its hardware and software.
- Its usage requires good skills to understand how to work with it properly.
- This is a very complex system that could implies an increase of instabilities on filesystem, computation nodes, high speed network...
- All resources are **SHARED** between all users (CPU hours, storage, bandwidth). *You need to adopt good practices to avoid to perturb other people. For example, you can be forced to clean your space very quickly if you didn't realize you used too much storage.*
- Computation centers have a **high level security policy**, so you cannot connect to them from everywhere and you need to respect rules.

CPU hours on Tier-1 (national) and Tier-0 (European) centers:

- Computing hours are attributed through bi-annual GENCI or PRACE calls (technical and scientific goals, roadmap, code efficiency and evaluation)
- Dynamical access (all year long) for project with <500 kh CPU or 50 kh GPU

What does HPC usage imply for you? (2/2)

General rules and advises:

- Quota: be careful with it! => Computing hours, storage, inodes (=number of file-system object such as file or directory)
- Jobs: priority algorithm between jobs (depending on the resources you request), max number of jobs running at the same time
- Use your computing hours regularly (to avoid peak usage of the machine)
- Security: never share your password!

If rules are not respected, computation centers could:

- remove amount of hours of the project
- block project jobs
- suspend account
- block filesystems (inodes or storage quota)

Outline

Infos : www.idris.fr

Computing **Irene Joliot-Curie ROME (197 120 cores, ~7 Pflops)**

2292 AMD Rome (Epyc) bi-processors nodes - 2,6 GHz, 64 cores/proc. 256 GB of DDR4 memory / node

Computing **Irene Joliot-Curie SKL (79 488 cores, 4,1 Pflops)**

1 656 Intel Skylake 8168 bi-processors nodes - 2,7 GHz, 24 cores/proc. 192 GB of DDR4 memory / node

Post : Irene xlarge
Access files (from outside) : https://thredds-su.ipsl.fr/… (only WORK space)
Assistance : hotline.tgcc@cea.fr or 01-77-57-42-42
Infos : irene.info or http://www-hpc.cea.fr/fr/complexe/tgcc.htm

TGCC (1/2)

- Filesystems:
  - *HOME : small space, back up*
  - *WORKDIR : working space and archiving of small files – quota 1Tb, no back up, no purge*
  - *STOREDIR : only for archive of big files – min 10Gb – quota 100 000 inodes, on tape*
  - *SCRATCHDIR : big working space, can be purged after 40 days*

We advise you to copy the **IPSL platforme environment** in the `HOME` of your account and **install** models into your project `WORKDIR`.

TGCC (2/2)

- Documentation:
  - https://forge.ipsl.jussieu.fr/igcmg_doc/wiki/Doc/ComputingCenters/TGCC
  - http://forge.ipsl.jussieu.fr/igcmg_doc/wiki/Doc/ComputingCenters/TGCC/Irene
  - http://forge.ipsl.jussieu.fr/igcmg_doc/wiki/Doc/ComputingCenters/TGCC/IreneAmd
  - Command on irene : `irene.info`
  - https://www-tgcc.ccc.cea.fr (private access for user only) or http://www-hpc.cea.fr/docs/userdoc-tgcc-public.pdf (public access)
- Assistance: 01 77 57 42 42, hotline.tgcc@cea.fr
- Connexion:
  - `ssh -X login@irene-fr.ccc.cea.fr` (SKL)

  or `ssh -X login@irene-amd-fr.ccc.cea.fr` (ROME)
  - for group quota, use `ccc_quota -g genXXXX`
  - for personal quota, only use `ccc_quota` to check

Quota are attributed for each project for all the group and not individually, so be careful of your own practices to avoid blocking all the group

IDRIS (1/2)

- Filesystems:
  - *HOME : small space, back up*
  - *WORK : working space, no back up, no purge*
  - *STORE : for archive, no back up*
  - *SCRATCH : big working space, is purged after 30 days, not save*
  - *JOBSCRATCH : temporary execution directory (for batch jobs),destroyed at the end of the job*

We advise you to copy the **IPSL platforme environment** in the `HOME` of your account and **install** models into your project `WORK`.

IDRIS (2/2)

- Documentation:
  - https://forge.ipsl.jussieu.fr/igcmg_doc/wiki/Doc/ComputingCenters/IDRIS
  - https://forge.ipsl.jussieu.fr/igcmg_doc/wiki/Doc/ComputingCenters/IDRIS/JeanZay
  - http://www.idris.fr (useful cheat sheet : http://www.idris.fr/jean-zay/cheat-sheet.html)
- Assistance: 01 69 35 85 55, assist@idris.fr
- Connexion:
  - `ssh -X login@jean-zay.idris.fr` *(JeanZay)*
  - `ssh -X login@jean-zay-pp.idris.fr` *(JeanZayPP)*
- The password is the same on *jeanzay* and *jeanzaypp*. Use *passwd* on one of the machines to change it.
- Quota for the whole group. Use *idrquota -s* and *idrquota -w* to check for $STORE and for $WORK.

Quota are attributed for each project for all the group and not individually, so be careful of your own practices to avoid blocking all the group

MesoScale clusters

- Modipsl and libIGCM are also adapted to be used at
  - *Obelix* – LSCE cluster (http://forge.ipsl.jussieu.fr/igcmg_doc/wiki/Doc/ComputingCenters/LSCE)
  - *Ciclad* and *ClimServ* – IPSL clusters (http://forge.ipsl.jussieu.fr/igcmg_doc/wiki/Doc/ComputingCenters/IPSL)
- Following functionalities are adapted
  - Compilation
  - Computing job
  - Rebuild
  - TS-SE
- Not adapted : *pack, monitoring and full coupled-model*

Outline

1. Introduction
2. IPSL models
3. High Performance Computing context
4. Which supercomputer(s) for us ?
5. **Tools, configurations and performances**
6. To go further
7. Now for today

IPSL Compile and run environment

Software infrastructure based mainly on **modipsl**, **libIGCM** and **XIOS** tools which allow to :

modipsl

- **predefine** and **extract** standard configurations
- **compile** sources from different components, coupling interfaces

libIGCM

- **adapt** and **launch** predefined experiments
- **monitor** simulations
- **produce** and **store** results from models
- **produce**, **store** and **distribute** some analysis

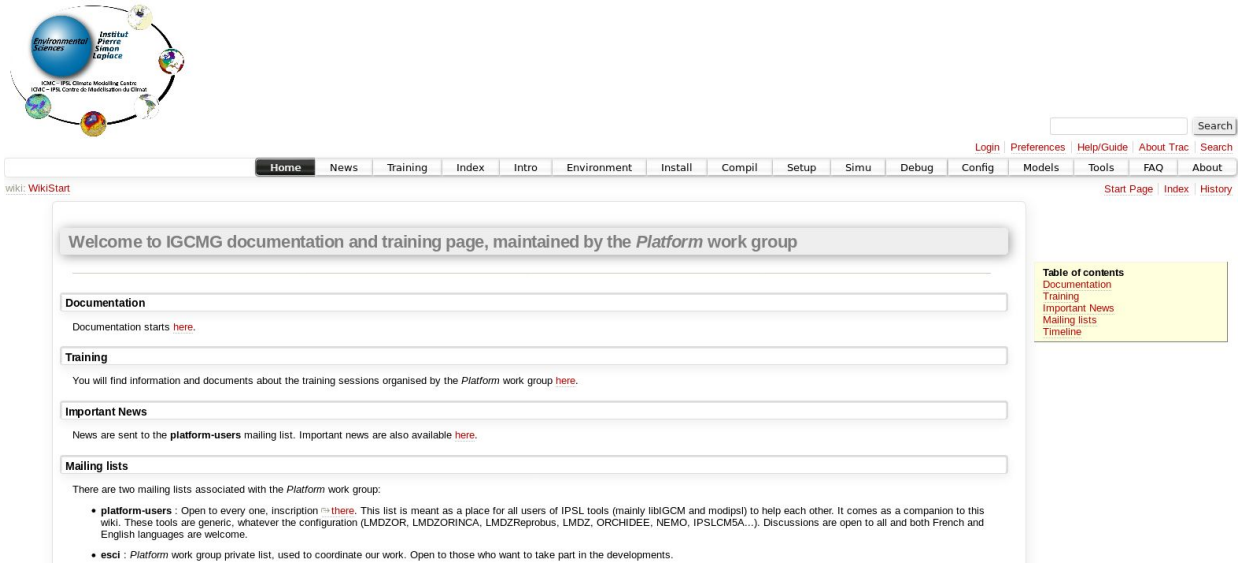
XIOS

- **read** input files
- **write** and **interpolate** results from models in parallel

Tools available for usage at TGCC, IDRIS, LSCE and IPSL cluster.

Web documentations & mailing list

- **Modipsl / libIGCM**: http://forge.ipsl.jussieu.fr/igcmg_doc



- **Platform-users**: https://listes.ipsl.fr/sympa/info/platform-users

Community list for communication between all IPSL tools users. Anyone can ask questions and answer his/her colleagues questions.

→ ***All users need to subscribe***

What is a configuration ? (1/2)

A configuration is a combination of one or several models (components) coupled together

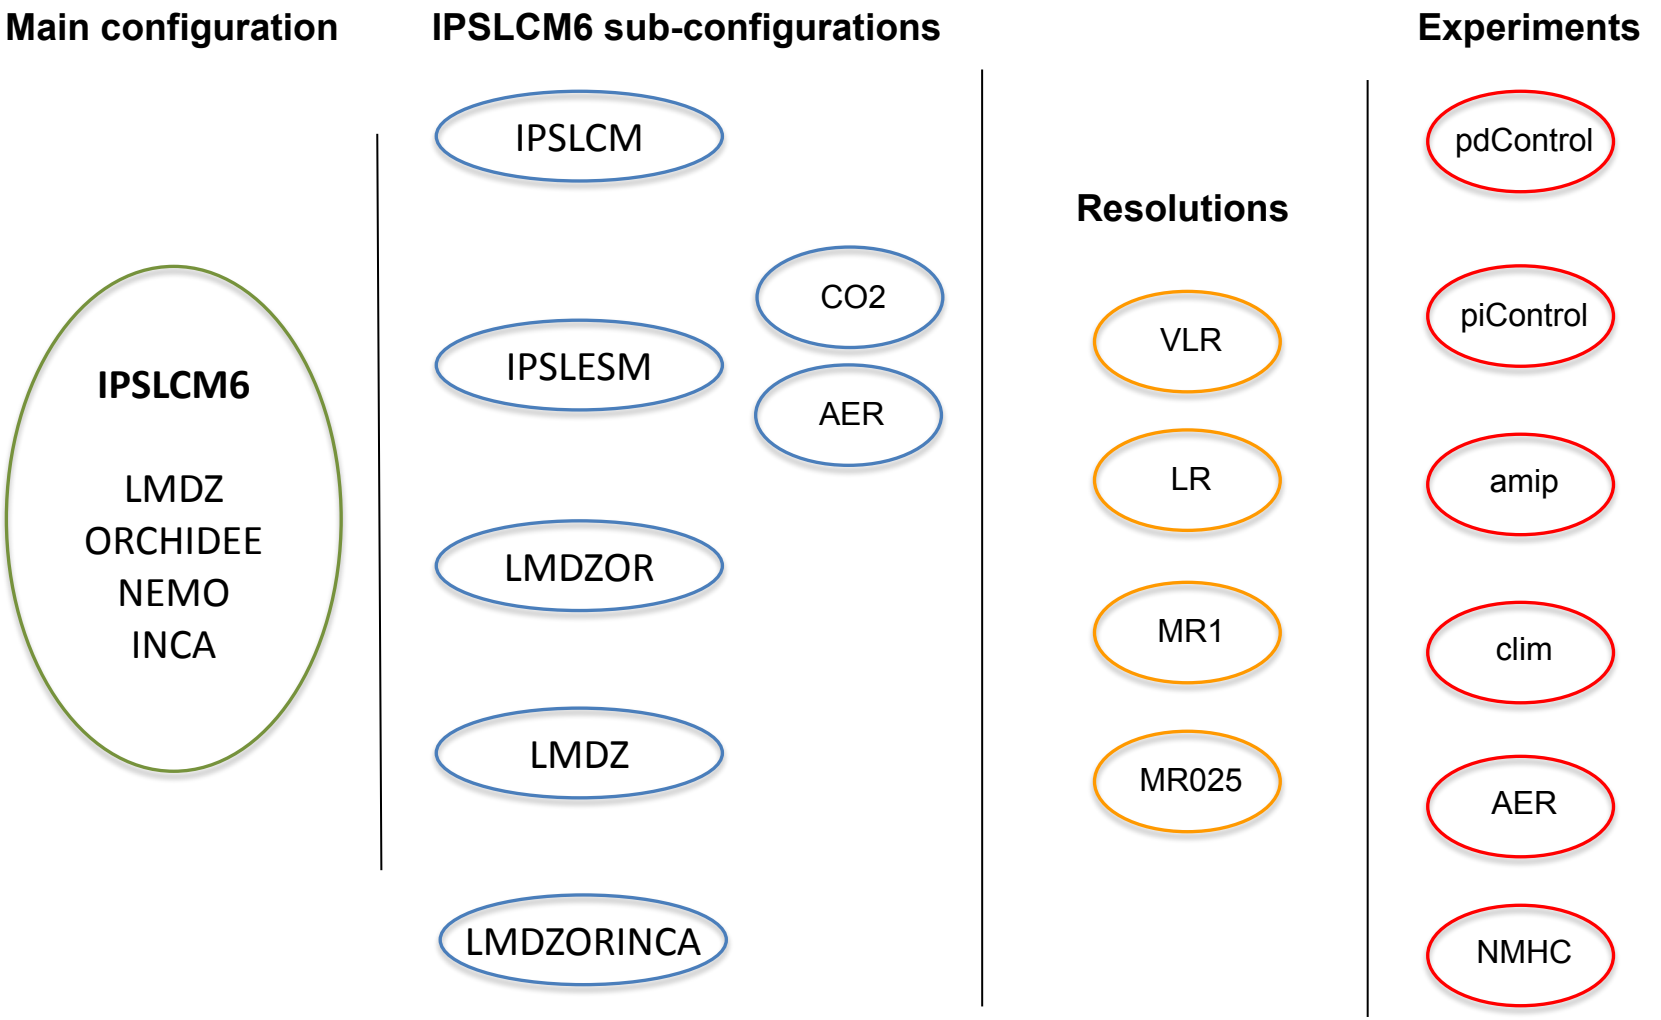
- For example the configuration LMDZOR contains the two models LMDZ and ORCHIDEE.

A configuration can be used for different experiments, using different setups, input parameters, etc.

- For example with the configuration LMDZOR you can run experiments with different parameterizations for the physics in the atmosphere.

- For example with the configuration LMDZOR you can run an experiment with only LMDZ

What is a configuration ? (2/2)



1 main configuration = 1 executable per resolution = several experiments (from sub-configurations)

Distributed configurations (1/3)

Actual configs : Recommended version of standard configurations. Parameters set up is the same for a component in all configurations of the "v6 family".

There are 3 types of v6 configurations:

1. v6.1 / v6.1.11 ⇒ versions used for CMIP6
2. v6.2 / v6.2_work ⇒ versions under development to improve CMIP6 version
3. v6.3 - 4 - 5 .. ⇒ versions to prepare next generation of configurations
4. *v7* ⇒ *next configurations (DYNAMICO and NEMO4)*

Main configurations proposed in this family are declined in v6.1 and several other types.

Distributed configurations (2/3)

IPSLCM6	Version of the coupled model used for CMIP6 *(currently IPSLCM6.1.11-LR)* Person in charge: A. Caubel
NEMO_v6	Forced ocean model OPA-LIM3-PISCES Person in charge: C. Ethé
LMDZOR_v6	LMDZ coupled with ORCHIDEE Person in charge: J. Ghattas
LMDZORINCA_v6	LMDZOR_v6 coupled with INCA Person in charge: A. Cozic
LMDZREPR_v6	LMDZ_v6 coupled with REPROBUS Person in charge: L. Falletti

ICOLMDZOR (and ICOLMDZORINCA) DYNAMICO as atmospheric dynamics coupled with LMDZ physics and ORCHIDEE (and INCA)
Persons in charge: A. Caubel, A. Cozic, J.Ghattas

Distributed configurations (3/3)

IPSLCM5A2	Previous version of the coupled model (*IPSLCM5*) used on a very low resolution (VLR) grid. Person in charge : S. Nguyen
IPSLCM5A2-CHT	coupled model in low resolution with an interactive atmospheric chemistry . Person in charge : A. Cozic
ORCHIDEE_trunk/ ORCHIDEE_2_0	Forced continental surfaces model ORCHIDEE, with latest version on the trunk of ORCHIDEE or tag 2_0. Person in charge: J. Ghattas.
RegIPSL	Regional coupled climate model of IPSL. Person in charge: R. Pennel.

General recommendation :

- *inform person in charge* before launching new studies based on one of these configurations, especially for coupled models.
- Read model and configuration documentation before using it!!!

IPSL ESM : ongoing developments

- **New atmospheric dynamical core DYNAMICO**
  - better computing performances/scalability
  - new architectures (GPUs, MPPs, MICs)

Lon-lat grid   ***Icosahedral grid***

- **NEMO v4** and **SI3** (new sea-ice model), final phase of development
- **CMIP6 workflow**: to integrate the CMIP6 specific workflow (outputs) for "usual runs", available and already used for specific cases
- **StratAer:** config with stratospherical microphysics
- **Ongoing developments**
  - **XIOS 3.0** (XIOS multithreaded (OpenMP) to target « many cores » architectures, coupling functionalities)
  - Ensemble runs (specific I/O design)
  - Zoomed configuration

Training courses

Training courses at IPSL:

- *IPSL climate modeling: training in simulation tools* (contact platform-training-team@listes.ipsl.fr), current session
- *LMDZ training course* (contact Laurent.Fairhead@lmd.jussieu.fr), next session in December 2022
- *ORCHIDEE Introduction* 2-days course (contact orchidee-help@ipsl.jussieu.fr), past session was in January 2022
- XIOS training course (contact xios-team@forge.ipsl.jussieu.fr), past sessions in 2021
- PISCES training course (contact formation_pisces@locean.ipsl.fr), next session in October 2022

Other suggested training courses:

- *Programming in Fortran* (niv1, niv2), *MPI, OpenMP and Hybrid MPI/OpenMP* at IDRIS twice a year www.idris.fr
- Training course for using the computer centres (not available actually, usually at TGCC)
- UNIX course
- https://calcul.math.cnrs.fr/category/formation.html→ give an inventory of training course (numeric – calcul – hpc) in France

Outline

1. Introduction
2. IPSL models
3. High Performance Computing context
4. Which supercomputer(s) for us ?
5. Tools, configurations and performances
6. To go further
7. **Now for today**

Now it's your turn to practice!

Advices and informations for this training (1/2):

Today's on **JeanZay specific training accounts**:

- Connect on "`ipcoursX`" session.
- You login: use the `cforXXX` login/password provided to you

If you need to **switch between qwerty and azerty** you can use the command **`alt+shift`**.

Download training_exercises_2022.pdf, training_exercises_answers_2022.pdf and main_commands_summary_2022.pdf at:

http://forge.ipsl.jussieu.fr/igcmg_doc/wiki/Doc/Training

Now it's your turn to practice!

Advices and informations for this training(2/2):

- **Not all exercises are meant to be done**: select topics based on your knowledge of modipsl/libIGCM and your needs.

BEGINNER	INTERMEDIATE	SPECIALISED
0. Introduction 1. Check your quota 2. Installing and compiling 3. Basic simulations	4. Debug 5. Create time series 6. Monitoring and Inter-monitoring 7. How to REDO part of a simulation 8. Modify output using XIOS 9. Output files manipulations	10. Install and run NEMO-PISCES 11. Ensembles 12. Coupled model 13. ICOLMDZOR configuration

Beginner: to be done by everyone, in this order.
Intermediate and **specialised**: depending of your level and your needs, not meant to be done in this order.

- **Take your time to read everything in the doc!** All is explained.

Do not hesitate to ask questions! ☺
