Trac Ticket Batch Modification

From <u>custom query</u> results Trac provides support for modifying a batch of tickets in one request.

To perform a batch modification select the tickets you wish to modify and set the new field values using the section underneath the query results.

List fields

The Keywords and Cc fields are treated as lists, where list items can be added and/or removed in addition of replacing the entire list value. All list field controls accept multiple items (i.e. multiple keywords or cc addresses).
