Wiki Page Names

Wiki page names commonly use the <u>CamelCase</u> convention. Within wiki text, any word in <u>CamelCase</u> automatically becomes a hyperlink to the wiki page with that name.

CamelCase page names must follow these rules:

- 1. The name must consist of alphabetic characters only. No digits, spaces, punctuation, or underscores are allowed.
- 2. A name must have at least two capital letters.
- 3. The first character must be capitalized.
- 4. Every capital letter must be followed by one or more lower-case letters.
- 5. The use of slash (/) is permitted in page names (possibly representing a hierarchy).

If you want to create a wiki page that doesn't follow <u>CamelCase</u> rules you can use the following syntax:

```
* [wiki:Wiki_page], [wiki:IS09000],
   and with a label: [wiki:IS09000 IS0 9000 standard]

* [wiki:"Space Matters"]
   and with a label: [wiki:"Space Matters" all about white space]

* or simply: ["WikiPageName"]s

* even better, the new [[WikiCreole link style]]
   and with a label: [[WikiCreole link style|WikiCreole style links]]
```

This will be rendered as:

- Wiki_page?, ISO9000?, and with a label: ISO 9000 standard?
- Space Matters? (that page name embeds space characters) and with a label: all about white space?
- or simply: WikiPageName?s (old MoinMoin's internal free links style)
- even better, the new WikiCreole link style? and with a label: WikiCreole style links? (since 0.12, also now adopted by MoinMoin)

Starting with Trac 0.11, it's also possible to link to a specific *version* of a Wiki page, as you would do for a specific version of a file, for example: WikiStart@1.

You can also prevent a CamelCase name to be interpreted as a TracLinks, by quoting it. See TracLinks#EscapingLinks.

As visible in the example above, one can also append an anchor to a Wiki page name, in order to link to a specific section within that page. The anchor can easily be seen by hovering the mouse over a section heading, then clicking on the ¶ sign that appears at its end. The anchor is usually generated automatically, but it's also possible to specify it explicitly: see WikiFormatting#using-explicit-id-in-heading.
