

Merge-OCN

- To start with a 'reference' version of OCN
 - For the moment, the main repository :
 - branch/orchidee-N
 - Are there more appropriate versions to work with ?
- To account for the new allocation scheme:
 - DOFOCO branch
 - synchronized with the trunk
 - With additional features
- To benefit of the 'bugs' fixed by Nicolas, Bertrand, Ben
 - Is a shared wiki page convenient for you ?

Road map

- Starting from DOFOCO branch for the allocation scheme – What should we remove ?
- Inclusion of the full N cycle (flag stomate_ncycle_active)
- Inclusion of the C/N interactions (flag ncycle_feedback)
- Possible inclusion of Friend's photosynthesis scheme (account for diffuse and direct radiations) – To test
